# The Moose Dahlia Farm

Mrs. Murry M. Moose Wayland, N. Y., R. F. D. 3, Box 62

PHONE SPRINGWATER 107F12

IN issuing this new catalogue for the Spring of 1927, I take great pleasure in thanking my many friends for their generous patronage in the past and I hope to merit a continuance of their patronage.

I am always glad to welcome visitors to my gardens who are interested in plants and flowers. My gardens are located six miles northeast of Dansville, six miles northwest of Wayland, and three miles southwest of Webster Crossing.

#### Terms of Sale

All orders under \$1.00, postage extra. Cash with order or in advance of shipment. Prices quoted include postage or express charges to all railway points in the United States, when purchased at retail for \$1.00 or more worth of bulbs.

Non-Warranty: I guarantee the safe arrival of goods by mail or express and will continue to use the same careful, painstaking methods in filling orders with stock of known vitality and of superior merit, but will not be responsible for future results or failures. Errors should be reported at once.

The prices quoted in this list are as low as is consistent with the quality of stock I send out. On account of the extreme shortage of some varieties it is very important to order early. My stock of some of the choicest varieties is limited and it is often impossible to secure them late in the season.

When ordering, please write your name, post office, county and state plainly and give your nearest express office address, if it is different from your post office address.

CUT FLOWERS—During the blooming season I can generally supply cut flowers of Gladiolus, Dahlias, Sweet Peas, Asters and other plants.

Kindly send me the names of your flower-loving friends. I shall be glad to send them copies of my catalogue and will repay you by including extras with your order.

Prices quoted are for divided, field-grown roots only. Would suggest naming a few varieties as second choice. All orders are shipped after May 1st, unless otherwise ordered.

We grow many varieties in too small quantities to catalogue. If there is some Dahlia or Gladiolus that you want and do not see it catalogued, ask for it, I may have it. I am a member of the American Dahlia Society and American Gladiolus Society. References, Springwater State Bank, Springwater, N. Y.

Wayland, N. Y.

# Have You Any Bugs?

FORTUNATELY the dahlia is comparatively free from insect pests. Yet there are some pests that make serious trouble for the dahlia grower, more especially in dry, hot weather. Some years there are scarcely any insects to cause trouble, at others they are nation-wide.

g the more common pests might be mentioned Tarnish Plant Bug. Space forbids a full treatise. Among the Thrips,

In brief these symptoms appear.

Thrip—A check in the growth of the plant when about 8-12 inches high, with curled and crinkled leaves.

Tarnish Plant Bug-Failure to bloom, stunted growth at the tip of the branches, small warty bumps on the stems.

Remedy—Dust freely with flower of sulphur in the morning. It should be done four times at intervals of four days. Some growers, as soon as the shoots come through, spray with "Black Leaf Forty" every week to be sure to keep them away.

### Dahlia Culture

DAHLIAS do best in a light, porous soil, with good drainage. Wet feet are as fatal to them as to roses. While they will do fairly well in 25 per cent shade, an open location, in full sunshine, is much to be preferred. Do not have the soil too rich, for too much fertilizer, too much water, or too much shade, will cause the plants to grow tall and rank, but almost barren of blooms. Heavy clay soils should be made light and frighte by adding ashes or water, of too much shade, will cause the plants of glow sails should be made light and friable by adding ashes or sand, 40 per cent being none too much. Cultivation is everything with dahlias. Never allow the top of the ground to become hard and baked. Keep it finely pulverized with hoe or rake, particularly so during dry weather. If your dahlias do not do well do not blame the grower from whom you bought your tubers. Do not plant too early; the tubers may rot during a cold wet spell. Plant five inches deep, laying tuber flat, sprout side uppermost. Do not let fresh fertilizer touch the tuber. If you add any barnyard manure to very infertile soil, be sure the manure is old, well-rotted, and mixed thoroughly in the soil. A small tuber is as good, often better, than a big one. Dahlias may be planted from the first of May to the first of July. June first is about right. The dahlia is an autumn flower and blooms best when the heat of August has passed away. Follow my suggestions, and write me of your success in the fall. the fall.

After the plants have been frozen in the fall, dig carefully and store the roots in a dry, cool cellar for winter. In the spring, the roots should be divided, preferably to one eye, before planting.

#### Abbreviations Used

C.—Cactus—Long, narrow incurved or twisted with sharp points.

H. C.—Hybrid Cactus—Broader and more massive petals

than the true cactus.

-Decorative-Large double flowers, full to the center, with somewhat broad and flat petals.

H. D .- Hybrid Decorative-Broader petals than Hybrid Cactus.

P .- Peony-One to three rows of long, flat or twisted petals with open yellow center. Show-Closely quilled, ball shaped.

C. of M .- Certificate of Merit from American Dahlia Society.

Pom.--Pompon Dahlias are identical in form with Show Dahlias, but are small.

Si .- For show.

Si.—Single Dahlias have a single row of petals surrounding a golden yellow center. They are very graceful and free-flowering.

Coll.—Collarette Dahlias are single Dahlia row of petals inside of the outside row. Reg. Registered by American Dahlia Society. single Dahlias having a

Gladiolus Culture
Gladiolus are of very easy culture. The bulbs may be planted as early as the ground can be worked and for a succession of bloom every two weeks up to July. The ground should be dug deeply and the bulbs planted 4 to 6 inches apart in the rows. A sandy loam soil away from the shade of trees or buildings, suits them best, although they will thrive in any good garden soil. In heavy soil plant from 3 to 4 inches deep and in light soil plant from 4 to 5 inches deep.
Gladiolus
Each Doz.
Alice Tiplady—Considered one of the finest Primulinus Hybrids ever produced. Large flowers of an exquisite rich, orange saffron\$.10 America—Large, clear lavender pink
